

Single-Cell Study Portal - Production Architecture

Prepared for U-M public hosting review | 23 July 2026 | Implemented components are solid; proposed ingress is marked

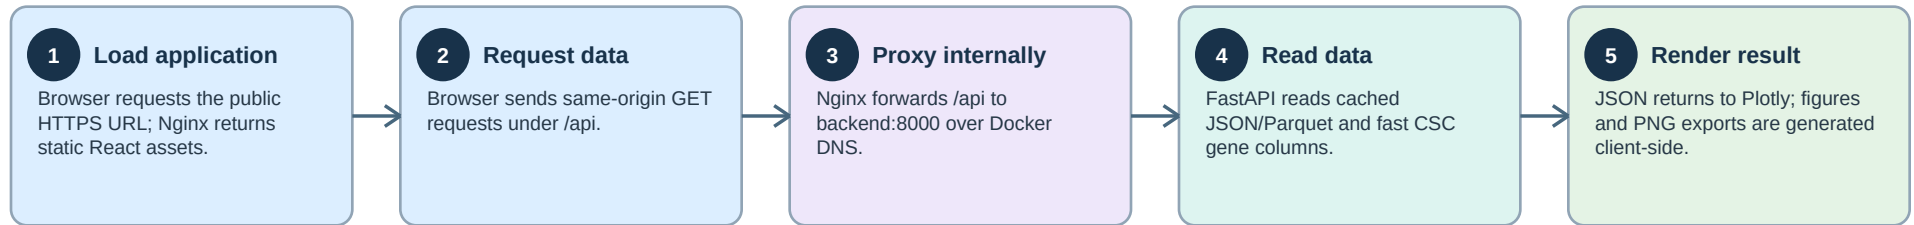

Data classification assumption: non-human zebrafish and mouse retinal data; no PHI, PII, credentials, or human-subject data. Data owner to confirm.

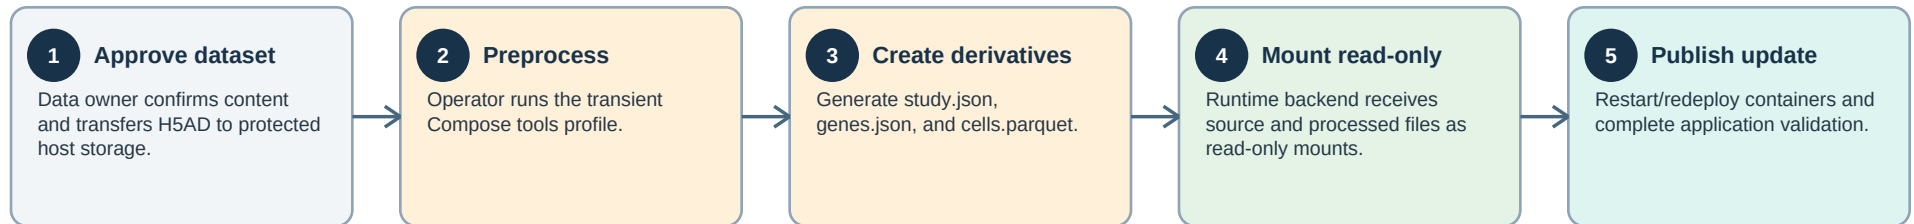

Data Flow, Controls, and Review Decisions

Normal public traffic is read-only; dataset publication is a separate authorized administrative workflow

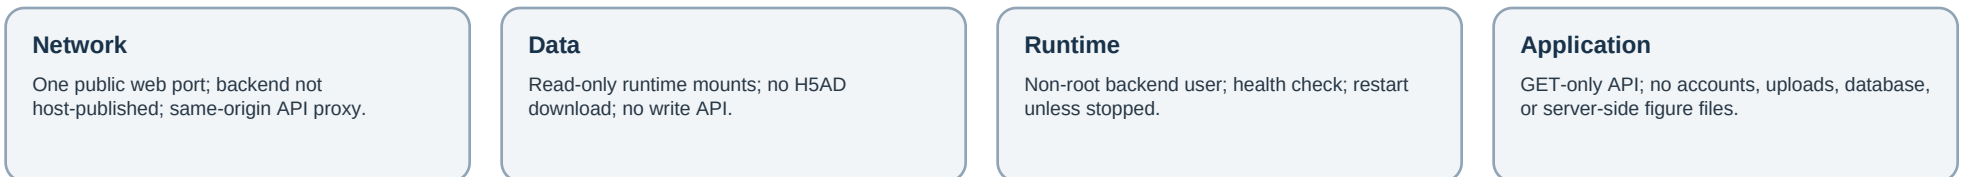

A. Normal public request path No user data is uploaded or persisted by the application

B. Controlled dataset publication path Not reachable from the public web application

Implemented controls

Decisions requested from U-M hosting/security

1. Public subdomain and DNS owner
2. TLS certificate / ingress service
3. Approved host port and firewall path
4. Scanning, patching, logs, and monitoring requirements
5. Confirmation that anonymous public access is acceptable
